IN THE SPECIFICATION

In the specification, on page 8, before line 12, please insert the following:

Brief Description of the Figures

Figure 1 shows that immunoglobulin binds the used mAb in a non-covalent manner.

Figure 2 shows a comparison of the capability of the humanised superagonistic mAb hN4 5.11A1 to stimulate unseparated human pBMCs in a soluble form to that of a bead-coupled form.

Figure 3 shows a comparison of microparticles from Example 1 to that of microparticles used in Example 1 not coupled with mAbs.

Figures 4a-4f shows the comparison of the stimulation of T-cell sub-groups with microparticles according to the invention. practically all CD4 T cells and the majority of the CD8 T cells are Ki67-positive and consequently proliferate.

Figure 5a-5e shows the comparison of the stimulation of regular T-cell resulting; as a result not only CD25- T cells, but in particular also CD25+ T cells can be stimulated with the microparticles according to the invention
